WORK EXPERIENCE

Deutsche Telekom Digital Labs

Software Engineer

Jul 2024 - Present

- Designed and developed RESTful APIs using Java, Spring Boot, and Spring Web, supporting CRUD operations and core business logic.
- Implemented a configurable log retention strategy to optimize storage and enforce region-specific data policies.
- Developed a dynamic request-limiting mechanism to prevent performance-heavy operations, resulting in reduced system load and faster API responses.
- Migrated hardcoded service test configuration values to type safe enums, simplifying logic and reducing duplication.
- Enhanced API flexibility and maintainability by supporting new data fields and improving existing update flows.
- Strengthened backend security by resolving vulnerabilities such as Stored XSS and EL injection, using reusable input validation and sanitization utilities.
- Feign client exception handling across microservices, improving error traceability, code reusability, and cross-service consistency.
- Utilized tools like Git, Postman, and Jenkins within CI/CD pipelines to streamline backend development and deployments.
- Maintained high test coverage by writing unit, component, and integration tests using JUnit, Mockito, and WireMock.

Alteryx

Software Engineer Intern

Jan 2024 - Jun 2024

- Worked with the Alteryx Analytics Cloud Platform, gaining in-depth expertise in data connectors, data wrangling, workflows, and job engines.
- Developed and enhanced converged data connectors for seamless integration across both cloud and desktop products, reducing duplication of effort and improving maintainability.
- Designed and implemented APIs to enable data preview before import into workzows, enhancing user eqperience and data validation capabilities.
- Tested and validated APIs using Postman, ensuring functional accuracy, performance, and smooth integration within platform workflows.
- Performed unit testing and root cause analysis using Datadog logs and stack traces, helping identify and resolve issues to maintain system reliability.

EDUCATION

Motilal Nehru National Institute of Technology, Allahabad

Bachelor of Technology, Computer Science and Engineering - 7.32 Dec 2020 - May 2024

Gulf Indian School, Kuwait

Class XII - 96%

2019 - 2020

Class X - 93.6%

2017 - 2018

PROJECTS

Flight Booking System

- Designed and developed a Flight Booking System with a microservices architecture, comprising Flight-Service and Ticket-Service for seamless airline reservation management.
- Implemented Hexagonal Architecture to ensure a flexible, decoupled, and maintainable application structure.
- Developed RESTful APIs for flight management (checking availability, updating flight details) and ticket booking (reservation, retrieval, and cancellation).
- Integrated Feign Clients for efficient and reliable inter-service communication, reducing direct dependencies between microservices.
- Implemented robust exception handling with custom exceptions and mappers, improving error management and response consistency.
- Developed and executed comprehensive unit tests using JUnit and Mockito, ensuring high test coverage and code reliability.
- Tools & technologies used: Java, SpringBoot, MongoDB, JUnit, Mockito, Gradle etc.

YaTravel!

- Developed a location-based travel companion app that detects the user's current location and provides personalized recommendations for nearby tourist attractions, activities, and experiences.
- Designed and implemented the 'Local Whispers' feature, enabling users to connect with locals and discover hidden gems and off-the-beaten-path destinations through real-time interactions.
- Integrated Google Maps API and GPS services to ensure accurate location tracking and seamless navigation assistance.
- Leveraged Firebase for real-time data storage and user authentication, enhancing app performance and security.
- Built a smooth and responsive UI/UX using Flutter and Dart, ensuring a seamless experience across Android and iOS devices.
- Utilised Android Studio's emulator and real devices to ensure compatibility, stability, and smooth functionality.

SKILLS

- Data Structures and Algorithms: C, C++, Java, Python
- Frameworks: Spring Boot
- Databases: MongoDB, Firebase, MySQL
- Object Oriented Programming: C++, Java
- Core Subjects: Operating Systems, System Design, DBMS, Computer Networks Testing: JUnit, Mockito
- App Development: Flutter, Dart
- Tools: Postman, Git, Docker

ACHIEVEMENTS

- Participated in Hack36, Droidrush, DevJam in Avishkar '21 and Avishkar '22
- CULRAV '22 winner
- Participated in Microsoft Engage '22
- Bagged several prizes in oratory events and debates in school and college
